PROJECTS

•Repair Hut Portal

Currently private on GitHub

- Tools & technologies used: TypeScript, CSS, Nest JS, MongoDB
- Worked with 6 peers to create a MERN stack web app. My primary role was front-end designing and coding for the client on-boarding application and user data to the database as well as internal user view to approve or deny client submissions

•Movie Application

github.com/JeffreyT72/Movie-Application

- Tools & technologies used: HTML/CSS, Java, JavaScript, Spring Boot, RESTful API
- Worked with 6 peers to create an application that will allow users to search for any previously nominated and/or winning Oscar movies by category of award. My primary role was all front-end UI as well as passing and handling data and queries between users to the database server

TECHNICAL SKILLS AND INTERESTS
